Removal

NOTE: Removal steps in this procedure may contain installation details.

! Extreme cold weather will cause breakage. A hair dryer can be used to localize warmth before flexing release tabs.

1. Using a non-marring plastic trim removal tool, start along the top of the fender vent and work your way down the sides to gently pry up and release the vent from the clips on the backside.

2. If the clips remained in the slots on the fender, remove old clips before installing new fender vent.

Installation

1. To install, line up the clips on the backside of the fender vent with the slots on the fender. Apply pressure evenly to snap clips into place.
