Step 7: Check your exhaust system for proper clearance under the vehicle and also for tip alignment, tighten the clamps to 32-35 ft. lbs, checking tip alignment and clearances as you do. There should be a minimum gap of 25mm from the tips to the edge of the car, and the tips should be in 25mm from the outermost edge of the rear bumper.

For the convertible, replace the brace and torque the fasteners to 47.5 nm (35 ft-lbs). Ref. picture on page 4. Check for clearance of the exhaust to the brace, differential housing, and body rail.

STEP 8: Start vehicle and check for any leaks. If any leaks are found, determine cause (such as loose or incorrectly positioned clamp) and repair as necessary.

Congratulations!!! You have completed the installation of your new Ford Performance Parts Exhaust Kit.

Note: When you first start your vehicle after the installation of your new Ford Performance Parts Exhaust System, there may be some smoke and fumes coming from the system. This is a protective water based coating used in the manufacturing of mandrel bent performance exhaust tubing. This is not a problem and will disappear within a very short period of time after the exhaust has reached operating temperatures.
